

FOGScreen

WALK THROUGH PROJECTION SCREEN MADE OF FOG

FogScreen is an exciting, revolutionary and unique technology, exclusive to PSCo in the UK.

It creates a thin and flat layer of fog floating in the air, and although the fog is made of water...you can walk through it without getting wet!

The FogScreen's density allows it to be effectively projected on, meaning its possible uses are endless...an

unusual awards ceremony entrance way, sales tactic or attention grabbing visual. The FogScreen can even be projected on both sides at the same time, with different images!

An innovative element for the FogScreen is its interactive sensor system which creates sensitivity to the touch! This means it can be used for touch screen presentations or entertainment, from running a computer program to managing

sales queries.

The FogScreen's interactivity allows the creation of multimedia shows that can be controlled by touching the fog!

Programmes which have already been developed for the Fogscreens allow luminous writing and drawing to be written in the air or fireworks to explode as you touch the screen.

SPECIFICATION

Projector:	Minimum 3500 ANSI Lumin
Rigging:	From truss or ceiling – at least 2m from the ground
Weight:	150kg
Equipment Size(mm):	900d 2310w 650h
Water consumption:	Between 5 and 10 litres an hour (Dependent on fog density)

FEATURES

- Walk through screen
- Cool and dry to the touch
- Made of tap water
- Projection capable on both side
- Touch screen compatible
